Peak Environmental Monitoring

What is IrriMAX ?

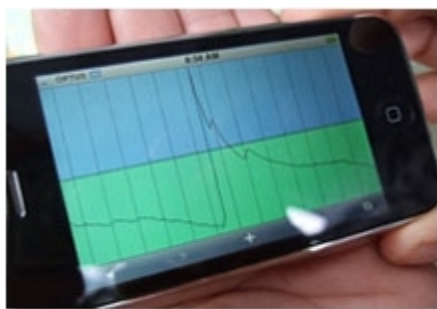

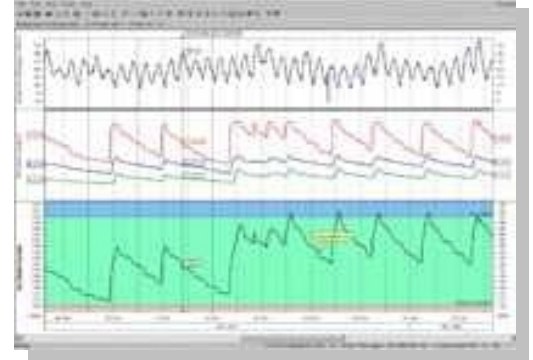

IrriMAX is display software which allows the graphical depiction of information derived from the soil probes. The software allows the user to set up distinct graphics indicating irrigation scheduling options.

The software features extraordinary powerful functions for including remarks, zooming, and colour coded indicators to represent varying soil moisture conditions

The IrriMAX software also incorporates functions for exporting data in html format to allow placement of data on the Internet and viewing via standard web browsers. Peak Environmental uses this function to provide end users with data access over the Internet including access to data via mobile phones.

Integration

In addition to charting soil moisture data the Sentek IrriMAX software can be used to display other variables such as rainfall, irrigation, pump run times, weather data such as collected by the Peak WXT 520 weather station and water level data.

Viewing soil data via mobile phone
